Jakub Pełka

Fullstack AI Developer

Katowice, Poland · +48 508 006 851
jakubpelkapraca@gmail.com
jakubpelka.me · github.com/jakub-pelka · LinkedIn

I build web applications with AI features in Next.js and TypeScript, from talking to users, through choosing and testing models, to deployment. I design for how people actually use a tool rather than for first assumptions. I automate repetitive work, but leave decisions with consequences to a human.

Available immediately, 4 days a week (on-campus classes on Tuesdays only); open to remote work.

EXPERIENCE

Freelance: web apps and AI automation 07.2026 – present

- Built my own lead pipeline: n8n collects job listings from Useme, a two-stage LLM evaluation filters them, and results land in Airtable
- Run discovery calls with clients and prepare scopes and quotes, including an AI assistant system for a trading and logistics company

Independent computer hardware service · diagnostics, repairs and custom builds within client budgets 2019 – present

Evelstar, courier · independent field work and direct customer contact 05.2024 – 01.2026

PROJECTS

Rekwizytor: theatre props management system
Next.js, Supabase (PostgreSQL, RLS), OpenRouter

- Built with the props team of a working theatre; after observing how they worked, I redesigned the data model from room-based to groups and boxes
- Tested several vision models (incl. Qwen3-VL) for detecting individual items in a photo with their positions; chose Claude Haiku 5.5 as cheaper, faster and accurate at naming objects
- Found that more detections is not better, as the model started to hallucinate; tuned the prompt for precision and validate model output with a Zod schema before it reaches the database

Praco: desktop app supporting the job application process
Vue 3, TypeScript, Tauri, Rust, SQLite

- Builds a CV tailored to a job offer from a conversation with the user; personal data stays local in SQLite and never reaches AI models
- A reranker (qwen3-reranker-8b) picks the CV points that best match the listing; parallelization cut processing time by about 41% (from 44 s to 26 s)
- A Chrome extension pulls the listing and fills in the application form (Playwright), but the user always makes the final call to submit (human-in-the-loop)

Browser agent for Claude Desktop
MCP, Browser Use

- Connected the open-source jev-ultrafast tool to Claude Desktop via MCP: a fast agent navigates websites while Claude handles context and content

SKILLS

Languages	TypeScript, Python, Rust, Node.js
Frontend	Next.js, React, Vue.js, Tailwind CSS · Desktop: Tauri
Databases	PostgreSQL, Supabase (RLS), SQLite
AI	LLM pipelines, vision models, embeddings and reranking, MCP, OpenRouter, Claude API, OpenAI API, Gemini API
Automation	n8n, Playwright
Tools	Git, GitHub Actions (CI/CD), Docker, Vercel, Postman, SonarCloud

EDUCATION

University of Economics in Katowice

Digital Economy, Master's degree (in progress) 2026 – present

Digital Economy, Bachelor's degree 2023 – 2026

Thesis: User attitudes toward digital persuasion techniques in mobile apps (dark patterns vs. positive nudging)

CERTIFICATIONS

INF.02	Computer systems administration and maintenance (Polish vocational qualification)
INF.03	Building and administering websites and web applications (Polish vocational qualification)
AI courses	AI Fluency (Anthropic) · Introduction to AI (Microsoft) · Future Skills: AI 2.0 (Google and SGH)

LANGUAGES

Polish (native) · English (B2)

I consent to the processing of my personal data contained in this CV for the purposes of the recruitment process, in accordance with the GDPR (Regulation (EU) 2016/679).
